

MEASUREMENT TEMPLATE FOR OUTSIDE RECESS WINDOW FITTING

Fitting a Powered Blind **outside** the window recess.

This template is to help you record the measurements for your motorised blind when fitting outside the window recess. Please download the '**Inside Recess Window Fitting**' template if you plan to fit your motorised cellular blind inside the window recess.

Using a metal tape measure, measure the distances as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring.

N.B. When recording measurements for the blind width, please take into account the amount of fabric you want to overlap the edges of the window recess. The motorized cellular blind will be made to your exact width dimension, so this measurement should equal the total window recess width + the fabric overlap at each side:

E.G. - Window recess width = 100cm, Overlap required = 4cm at each side

Blind width required = 100cm + 4cm (left side) + 4cm (right side) = 108cm
