

MEASUREMENT TEMPLATE FOR OUTSIDE RECESS WINDOW FITTING

Fitting a Motorised Roller Blind **outside** the window recess.

This template is to help you record the measurements for your motorised Roller blind when fitting outside the window recess. Please download the '**Inside Recess Window Fitting**' template if you plan to fit your motorised Roller blind inside the window recess.

Using a metal tape measure, measure the distances as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring.

N.B. When recording the measurement for the blind width, please be sure to take into account the space required for the powered blind brackets and motor head. This is because the fabric width will be approximately 3.6cm less than the overall exact blind width recorded.

Example - if your recorded measurement is 120cm, your blind will be fabricated so that the bracket to bracket width is 120cm once fitted, but the fabric width will be 116.4cm (see the diagram below with the blind in situ as a guide). Please ensure that your recorded measurement takes this into account when submitting your order.
