

## MEASURING FOR ROLLER BLINDS

### MEASUREMENT TEMPLATE FOR EXACT FITTING

This template is to help you record the measurements for your motorised Roller blind when fitting outside the window recess or if you prefer your blind to be supplied at the exact size ordered.

Using a metal tape measure, measure the distances (in CM) as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring.

**Important: The blind width you order is based on the bracket to bracket or cassette width.**

#### Standard System

When ordering a standard system and selecting 'Exact Fit', it is important you confirm exactly where the brackets are going to be fitted. The roller blind will be made so the bracket-to-bracket width is spaced exactly at the width you order. The fabric width will be approximately 36mm less than the bracket-to-bracket width.

#### Cassette System

When ordering a cassette system and selecting 'Exact Fit', it is important you confirm exactly where the cassette profile + brackets will be located before recording the measurements. The roller blind cassette will be made to the exact width you order. The fabric width will be approximately 39mm less than the cassette width.
