

MEASURING FOR ROLLER BLINDS

MEASUREMENT TEMPLATE FOR RECESS FITTING

This template is to help you record the measurements for your motorised Roller blind when fitting within the window recess.

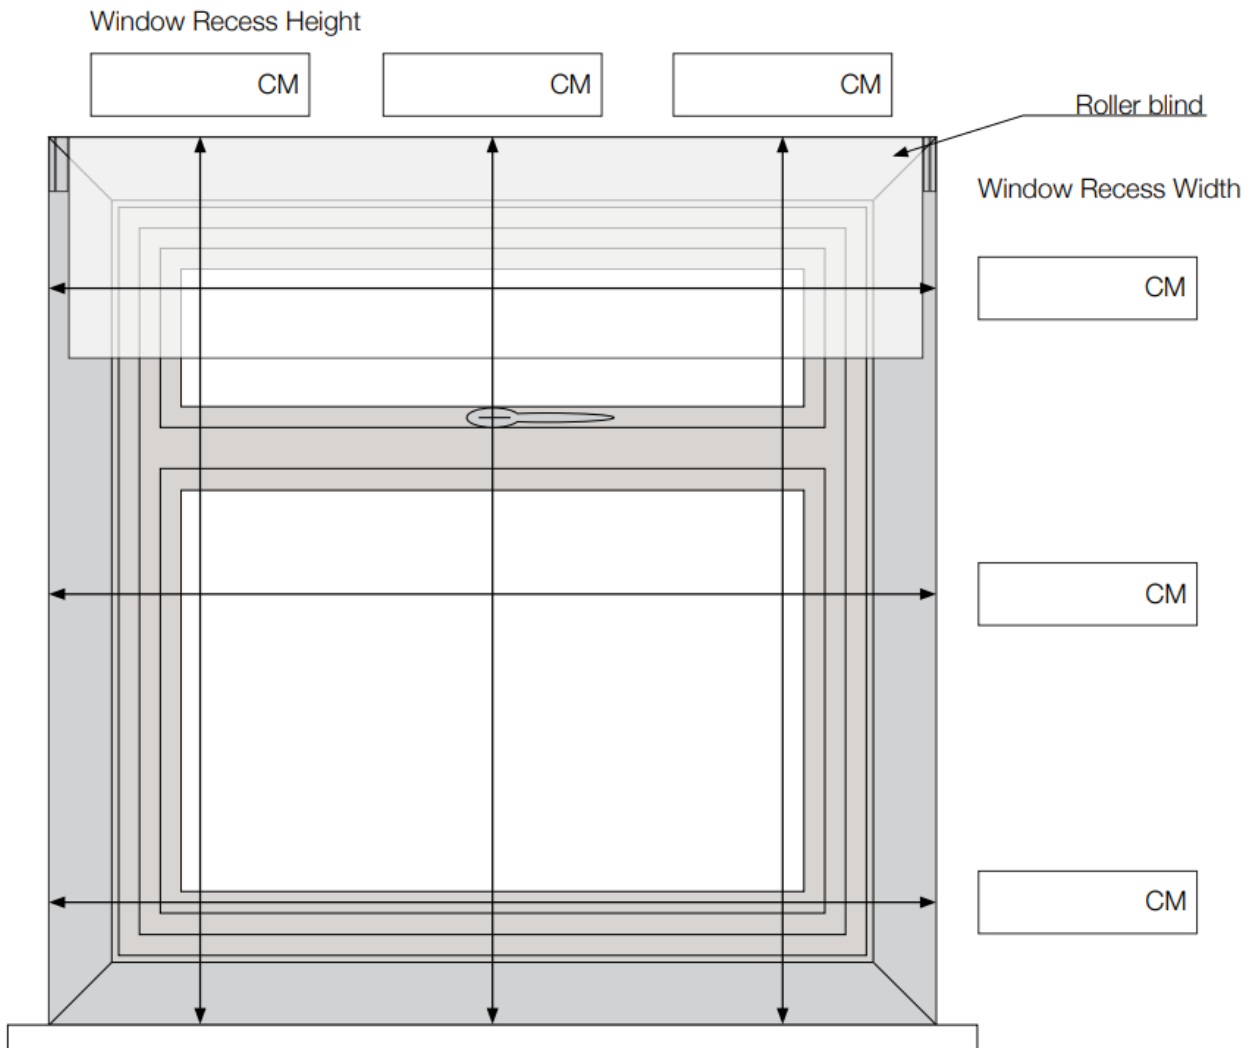

Using a metal tape measure, measure the distances (in CM) as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring.

Standard System

When ordering a standard system and selecting 'Recess Fit', we will allow a tolerance from the sizes provided so that the blind you receive will fit inside your window. The fabric width will be approximately 36mm less than the bracket-to-bracket width.

Cassette System

When ordering a cassette system and selecting 'Recess Fit', we will deduct 10mm from your width measurement. This is to ensure the cassette profile fits comfortably within the window recess area.

Record all measurements in CM and use the shortest of the three measurements when ordering your motorised Roller blind.
