

## DOUBLE ROLLER BLIND

The double roller blind comprises of two roller blinds on the same bracket, one blackout and the other in a sheer. The compact bracket design allows you to fit a dual roller blind fabric system.

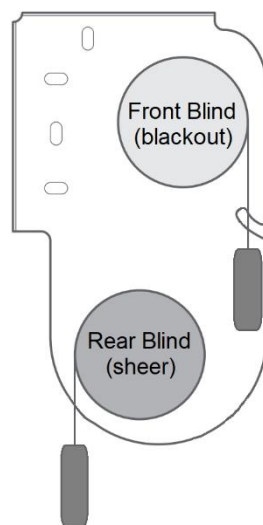

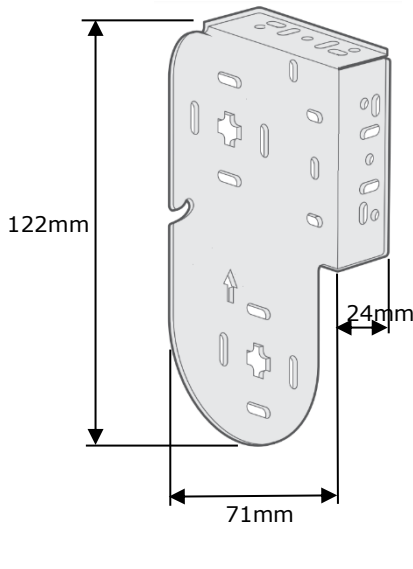

The sheer fabric located at the rear of the system offers light diffusion and a degree of privacy during the day with the front located blackout fabric offering privacy and light block when required.

The fabric of the blackout blind is front rolled and the sheer blind is rear rolled. A Somfy multi-channel control offers independent and group control of both blinds.
